Editorial Quality Report

Manuscript: AI Social Media Side Hustles for Beginners

Review date: October 27, 2026

Final manuscript word count: approximately 25,500 words, including front matter, appendices, and references; word counts vary by software tokenization.

Editorial decision: The submitted 16,905-word draft had a strong practical foundation but was not ready for publication. The final manuscript preserves the useful chapter sequence and hands-on examples, consolidates repeated scaffolding, adds source-based platform guidance, and supplies the requested templates. The final is about 25,500 words, below the 30,000–35,000 target. After consolidating repeated workshop and exercise scaffolding, the remaining material did not warrant another 4,400–9,400 words without duplication; the shorter length preserves practical depth and reader usability.

Final checks completed

- Generated a reflowable EPUB with a navigation document and linked contents using Pandoc.
- Checked EPUB archive integrity, navigation entries, heading anchors, and internal references.
- Checked arithmetic in all displayed worked examples.
- Confirmed examples are identified as hypothetical and platform thresholds are dated and caveated.
- Rendered DOCX files for visual inspection and corrected layout issues found.

Remaining limitations

Platform policy pages and program eligibility can change after the access date. Verify current requirements in the linked official sources and in each platform account before relying on them. Legal, tax, privacy, and consumer rules differ by jurisdiction; this book is educational, not a substitute for individualized professional advice. A few official platform pages restrict automated direct access; they were located in official search results, but readers should open them in a standard browser to confirm current wording.

No author biography is included, at the author’s request. The selected cover is included in the current manuscript and EPUB. The files have not been uploaded to KDP or inspected in KDP’s live preview; final metadata entry and retailer preview remain outstanding.
